SUMMARY

Customer focused Senior Frontend Developer with experience leading teams and delivering exceptional user experiences. I'm committed to writing high quality, scalable code and driving technical best practices. Looking for a position where I can own and shape a product that I truly believe in.

EXPERIENCE

Apadmi Digital Agency

2019 - 2025

Technical Lead | July 2023 - April 2025

- Architected and led the phased rebuild of a major student letting website with a team of 6 developers, delivering a high-performance, SEO-optimized solution with NextJS, Contentful CMS, and an Express BFF, resulting in 5x performance increase across new pages. Provided post-launch support, leveraging Azure App Insights for monitoring and optimization, and driving incremental improvements to user experience and business performance through A/B testing.
- Built a new corporate website for a major pizza delivery service using NextJS and Amplience CMS. Focused on accessibility, achieved full test coverage via TDD, and a component library documented with Storybook.
- Supported the development of junior and mid-level frontend developers through mentorship, code reviews, and best practice sharing.

Platform Lead | February 2022 - July 2023

- Led a multi-platform team in developing an audiology app for the hard of hearing, featuring interactive audiogram data visualizations and delivering a WCAG AA-compliant solution across Web, Android and iOS, while also assuming product ownership responsibilities to ensure project continuity and alignment.
- Built and delivered a short term car insurance quote journey with a team of 3 devs, using React SPA, OIDC auth, payment gateways, and a reusable component library with Storybook documentation. Implemented robust testing frameworks, including Chromatic screenshot testing and Selenium E2E testing.
- Pioneered accessibility considerations for web projects at Apadmi, leading knowledge sharing sessions and contributing to accessibility forums.

Software Engineer | August 2020 - February 2022

- Developed a React-based contact centre tool for a large telecoms provider, supporting agents in handling over 1 million monthly calls, and enhancing customer experience through improved efficiency and service delivery.
- Contributed to the migration of a content curation platform from legacy web components to Next.js, drastically improving page performance for thousands of community members across the world.

Graduate Software Engineer | August 2019 - August 2020

- Broadened technical skills through hands-on project contributions and guidance from experienced seniors.

Red Hat | Graduate Consultant

2018 - 2019

- Participated in an extensive technical and professional training program, gaining valuable experience in the Red Hat portfolio and agile working methodologies.

IBM | Undergraduate Placement Student

2016 - 2017

- Developed tooling to support a major database migration project affecting hundreds of staff across IBM.
